Hanover – January 2023

Uncompromisingly waterproof flooring systems

SELITSTYLE skirting FBL50 now with foam edge

At DOMOTEX 2023, SELIT is introducing a foam edge for its waterproof SELITSTYLE skirting FBL50, which can be added as an option. This makes the entire flooring system uncompromisingly waterproof.

Waterproof floor coverings have long since ceased to be a rarity, and laminate and vinyl coverings are used in wet rooms as a matter of course. However, enjoyment of this is short-lived if moisture damages the installed material or the wall and causes mould. Care must therefore be taken to ensure that all components are waterproof.

Due to the new foam edge of the waterproof SELITSTYLE skirtings, which is fitted to the bottom of the skirting and can be individually selected by the trade, the connection to the wall is watertight and moisture running behind the skirtings is virtually impossible. The floor system is therefore uncompromisingly waterproof.

Another advantage of the foam edge is the acoustic decoupling of the skirting from the floor. The sound generated by footfall noises cannot be transmitted to adjacent rooms through the skirting.

The foam edge is designed as a compressible L-profile, whereby the upper leg is firmly anchored in the milled groove by compression alone and holds in the groove without adhesive. This makes both components easily separable and recyclable. The lower leg is in contact with the floor covering. The narrow shadow gap created in the process is an attractive visual separation between the skirting and the floor.

The installation of the FBL50 with the SELITSTYLE installation set is also possible without restrictions due to the profile of the FBL50 modified for the foam edge. All accessories such as corners, connectors and end pieces continue to fit. The foam tape will be optionally available from the end of the second quarter of 2023 and is being developed for two other profiles in addition to the FBL50.
